

# One Brand. Any ISP. Zero Headaches.

Deliver a consistent experience across your entire portfolio, regardless of service provider.

## Residents Connect Before They Unpack

VAULT eliminates the frustration of move-in day internet setup. Residents receive secure Wi-Fi credentials automatically and connect instantly across the entire community.

### Step 1

#### Add Resident

VAULT has options. Residents are added by the property admin, network admin, via the PMS, or by self sign-up.

### Step 2

#### Send Welcome Email

VAULT automatically sends the resident a welcome email with link to view and accept the network operator's terms and conditions.

### Step 3

#### Set Account Password

Upon term acceptance, the resident creates an account password and logs in to access their Wi-Fi password. Done!

## VAULT for Multifamily

### Centralized Management Platform

Manage resident and guest access, monitor performance, and optimize connectivity across your portfolio from a single dashboard.

#### Automated Onboarding

Integrates with RealPage® and other property management platforms to automate resident setup, improve accuracy, and reduce admin work.

#### Property-Wide Roaming

One secure credential keeps residents connected throughout the community.

#### Hardware Agnostic

Works across leading network platforms, giving flexibility to choose the best solution for each property.

#### Enterprise Security with WPA3

Support for WPA3 multi-PSK provides every resident with unique credentials.
